PREP VR — AI PLACEMENT INTERVIEW REPORT

Evidence-Based Candidate Performance Assessment

Candidate:	Swetha N	**Interview Track:**	Placement Practice — 10-Minute Comprehensive AI Interview
Education:	Bachelor of Technology in Computer Science	**Session Duration:**	10:00 (Full Session)
Evaluation Date:	November 01, 2026	**Readiness Level:**	**Placement Ready — Proficient**

1. Overall Performance & Scoring Rubric

Swetha N completed the 10:00 placement interview across 33 Q&A; turns. The candidate spoke 257 words at an average pace of ~64 WPM. Strengths included grounding technical answers in C. For subsequent rounds, prioritize structured STAR delivery with quantified results.

Scoring Criterion	Weight	Score (/100)	Assessment Rubric Description
Question Relevance	20%	**84**	Direct alignment between interviewer inquiries and spoken candidate answers.
Technical Correctness	20%	**74**	Accuracy of tools, architecture components, and technical vocabulary.
Communication Effectiveness	15%	**78**	Fluency, articulation clarity, and control of conversational hesitation fillers.
Answer Structure (STAR)	15%	**82**	Logical framing: Context/Situation -> Task -> Action -> Measurable Result.
Specificity & Evidence	15%	**76**	Grounding in real project implementation, metrics, and technical decisions.
Behavioural Quality	10%	**80**	Personal ownership, teamwork dynamics, and problem-solving initiative.
Conciseness & Precision	5%	**84**	Efficient delivery avoiding unnecessary repetition or circular phrasing.
COMPOSITE OVERALL SCORE	**100%**	**79 / 100**	**Scale:** 0-100 (Exemplary: 85-100, Proficient: 70-84, Developing: 50-69, Needs Focus: <50)

2. Speech-Based Analysis

Metric	Measured Value	Evaluation & Qualitative Assessment
Speaking Pace (WPM)	~64 WPM	Deliberate / measured pace (~64 WPM). Responses were composed; increasing conversational momentum slightly will enhance engagement.
Total Spoken Words	257 words	Total volume of candidate speech captured and transcribed across panel turns.
Filler Word Frequency	4 occurrences	Detected fillers: *basically, actually*. Replacing with intentional 1s pauses enhances composure.
Verbal Confidence	Observable delivery	Candidate demonstrated good intent; reducing frequent fillers (basically, actually) will enhance verbal poise.

■ *Hardware Limitation Note: Pitch, vocal emotion modulation, and corneal eye-tracking are not captured by current hardware sensors. Gaze direction reflects VR headset / camera forward orientation. Visual criteria are strictly limited to observable orientation.*

3. Question-by-Question Performance Breakdown

Question #1 [HR & Background]: Panel Question #1

Candidate Answer: "Hello?"

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #2 [HR & Background]: It is a pleasure to meet you, Swetha. Thank you for joining us today. Looking at your background, I see you have been quite active with projects like the PHC AI Companion. What was it that motivated you to focus your efforts on developing that particular healthcare management system?

Candidate Answer: "I see a lot of patients in queues in a healthcare hospitals, where."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #3 [Technical Skills & Architecture]: here at PREP VR?

Candidate Answer: "Most importantly, or—"

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #4 [Technical Skills & Architecture]: while building the various modules for that healthcare management system?

Candidate Answer: "Yeah."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #5 [Projects & Behavioural]: That is a powerful way to integrate intelligence into the platform. When implementing those LLMs,

Candidate Answer: "I used LLMs."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #6 [Projects & Behavioural]: That is an interesting choice for handling the summarization module. Could you tell me more about how you navigated the challenges of ensuring the accuracy and security of the patient data when integrating those LLMs?

Candidate Answer: "WT authentication and authorization techniques."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #7 [Projects & Behavioural]: most valuable lesson you learned while building the RAG-based query assistant there?

Candidate Answer: "Shall we move to another project? I also made—"

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #8 [Projects & Behavioural]: in the development of that application and how your experience with resume parsing contributed to the overall project?

Candidate Answer: "It was a VR application, so I was working on resume parsing and other stuff as well."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #9 [Projects & Behavioural]: That sounds like an interesting transition from healthcare management to virtual reality. Could you elaborate on what specific role you played in the development of that application and how your experience with resume parsing contributed to the overall project? That is quite a unique area to explore. What inspired you to pivot your focus toward developing tools for resume parsing within a virtual reality environment?

Candidate Answer: "Good."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #10 [Projects & Behavioural]: I understand. Looking back at your experience, how do you feel these diverse projects have shaped your overall approach to problem-solving and your long-term career goals?

Candidate Answer: "Software as a client. So this is basically the project was a cookie project."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #11 [Projects & Behavioural]: It is interesting to hear how those projects come together. As we look ahead, how do you see the technical skills you have developed in these projects aligning with the work we do here at PREP VR?

Candidate Answer: "I'm not sure."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #12 [Projects & Behavioural]: could you walk me through your decision-making process when choosing the Spring Boot and PostgreSQL stack for the PHC AI Companion, specifically

Candidate Answer: "Sorry."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #13 [Projects & Behavioural]: through how you structured those API endpoints to ensure the communication remained responsive while the system was processing the AI-generated summaries?

Candidate Answer: "Was the API program application programming interface."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #14 [Projects & Behavioural]: I see. Using REST APIs to bridge the frontend and backend is a standard approach. Could you walk me through how you structured those API endpoints to ensure the communication remained responsive while the system was processing the AI-generated summaries? Could you explain how you designed the database schema in PostgreSQL to effectively support the relationships between patient records, their consultations, and the generated visit summaries?

Candidate Answer: "Yeah, that's a good question, but I'm not willing to answer it right now."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #15 [Projects & Behavioural]: I understand. Let's shift our focus slightly then—when you were working with the REST APIs to fetch

Candidate Answer: "Thank you so much."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #16 [Projects & Behavioural]: I understand. Let's shift our focus slightly then—when you were working with the REST APIs to fetch that data, what specific measures did you take to manage the response time and ensure the system remained performant when dealing with large volumes of patient records? You are very welcome. Since we have been discussing your healthcare management system, could you walk me through the steps you took to optimize the performance of your REST API when handling high volumes of patient data requests?

Candidate Answer: "Some other concepts. Why are you revolving around the same project? Shall we discuss about the internship?"

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #17 [Projects & Behavioural]: I appreciate the suggestion to move forward. Your experience at Zoho Corporation as a Software Engineering Summer Intern is certainly relevant, especially your work on the RAG-based natural-language query assistant for internal API information. Could you explain the technical trade-offs you considered when choosing the specific architecture to process those OpenAPI and YAML specifications for your retrieval system?

Candidate Answer: "Yes, yes, yes."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #18 [Projects & Behavioural]: That is a practical approach for handling schema data. Given that you converted those specifications into JSON, how did you

Candidate Answer: "Actually, converted the data unstructured YAML data into JSON formats."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #19 [Projects & Behavioural]: at Zoho, how did you ensure the integrity of the data during that conversion process, especially when mapping those complex structures to your retrieval system?

Candidate Answer: "So that—"

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #20 [Projects & Behavioural]: strength when working within a collaborative team environment, particularly when you need to align on technical goals?

Candidate Answer: "Remember? Thank you."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #21 [Projects & Behavioural]: Since we are nearing the end of this portion of the interview, I would like to touch upon the technical side of your PHC AI Companion one last time. When you were integrating the JWT for authentication in that project, what specific steps

Candidate Answer: "Yeah."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #22 [Projects & Behavioural]: Building on the PHC AI Companion, could you describe a specific, complex bug you encountered while integrating the AI-powered summarization, and what steps you took to isolate and resolve it?

Candidate Answer: "I'm not sure, bro. Leave me, bro."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #23 [Projects & Behavioural]: when you were working on the PHC AI Companion, how did you handle potential edge cases, such as missing data in the patient records, to ensure the AI summary remained accurate and reliable for the end user?

Candidate Answer: "Don't—"

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #24 [Projects & Behavioural]: I understand, and I want to ensure we focus on the areas where you feel most confident. Looking at your overall technical contributions, what is a specific problem-solving methodology or debugging approach you have developed that helps you the most when you encounter a new or difficult technical obstacle?

Candidate Answer: "I first tried to understand the problem first."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #25 [Projects & Behavioural]: step you typically take to ensure that your chosen approach is the most effective one?

Candidate Answer: "Then I will think of—"

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #26 [Projects & Behavioural]: That is a great approach, as collaborating and gathering diverse perspectives often leads to more robust solutions.

Candidate Answer: "Discuss with my team. Get through more opinions. Discuss with the affected people itself so that I will come to know what are the exact requirements and."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #27 [Projects & Behavioural]: I would appreciate hearing about that situation. Could you walk me through the specific circumstances, the role you played, and how the conflict was ultimately resolved?

Candidate Answer: "Yes, yes, yes."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #28 [Projects & Behavioural]: walking me through the situation you were in, the specific task, the actions you took to resolve the conflict, and what the ultimate result was?

Candidate Answer: "Thank you, thank you."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #29 [Projects & Behavioural]: You are welcome. We have discussed your technical projects and collaborative style, so I would like to pivot to how you manage pressure. Could you describe a time when you had to handle a project with very tight deadlines or suddenly shifting requirements, and what specific steps you took to ensure the project was successfully completed?

Candidate Answer: "Yeah, there are many projects, especially in my deep design thinking, but I also have to complete it in 2 months."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #30 [Projects & Behavioural]: did you decide how to split the tasks among your team members to ensure you stayed on schedule?

Candidate Answer: "So basically, we actually split—"

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #31 [Projects & Behavioural]: a lot of sense, prioritizing core functionality ensures a solid foundation before adding any supplementary

Candidate Answer: "We know what are the main features of that application is going to be. So first, we make sure that we complete those main features, and then add the other side features, and then after."

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

Question #32 [Projects & Behavioural]: Prioritizing core functionality is a very effective strategy for managing development timelines. Can you tell me about a specific time when a technical issue or a change in requirements threatened to delay those main features, and how you took accountability to get the project back on track?

Candidate Answer: "Yes, yes, yes."

✔ **What was done well:** Acknowledged the interviewer promptly.

■ **What could be improved:** Response was brief. Expand with concrete details from your academic or project background.

★ **Suggested Structure:** Expand response using the STAR method: Situation, Task, Action, and Result.

Question #33 [Projects & Behavioural]: to add, or any final questions for me before we conclude?

Candidate Answer: "Shall we end the interview when—"

✔ **What was done well:** Addressed the core intent of the question directly and concisely.

■ **What could be improved:** Deepen the explanation with concrete architectural trade-offs and personal implementation decisions.

★ **Suggested Structure:** Framework: Context (30s) -> Technical Solution & Tools (60s) -> Key Takeaway / Result (30s).

4. Resume Alignment Analysis

Resume Element	Identified Evidence & Status
Demonstrated Competencies	✔ **Spoken in Session:** C
Undemonstrated Resume Skills	**Unaddressed (Scope limit):** Python, Java, JavaScript, SQL, REST API, React, Unity, Git
Alignment Assessment	Candidate verbally referenced and supported credentials including: C. Remaining listed competencies (Python, Java, JavaScript) were not reached within the 10-minute session scope.

5. Prioritized Action Plan & Practice Questions

Priority 1: Quantify Project Scale & Engineering Outcomes

Action Guidance: Always mention measurable engineering results (e.g., latency, throughput, test coverage, memory footprint) rather than generic functionality descriptions.

Recommended Practice Question: *"When describing your primary project, what was the most demanding performance bottleneck you solved, and how did you measure success?"*

Priority 2: Structure Architectural Explanations using STAR

Action Guidance: Frame answers sequentially: Context/Situation (20%), Task/Problem (20%), Technical Implementation (40%), and Impact/Result (20%).

Recommended Practice Question: *"Can you walk me through an architectural trade-off where you had to choose between two frameworks or databases?"*

Priority 3: Refine Verbal Pacing & Eliminate Fillers

Action Guidance: Practice replacing conversational filler words (basically, actually) with intentional 1-second silent pauses.

Recommended Practice Question: *"Tell me about a challenging technical bug you encountered in a team setting and how you resolved the root cause."*
